

# *Manejo y reporte de hallazgos de salud*

# ***HANDLING OF CLINICAL FINDINGS***

- All exams ( physical & biological & images) are reported back with an explanation that these results are not considered clinically diagnostic
- In case of detection of mild alterations, we provide general life-style changes ( particularly for overweight/obesity) and suggest re-examination and visit to a medical doctor
- In case of more severe alterations we contact a medical doctor from our team who is in charge of doing the clinical evaluation and the derivation to secondary care if needed; we do telephonic follow-up to these cases

# ***HANDLING OF CLINICAL FINDINGS***

- Detection of behaviors that may threaten the patient or other people's life is a criteria for intervening /talking to a councilor and/or parents (it is explicit in the informed concern)
- This is more frequent with adolescents: pregnancy detection during pregnancy tests (required prior to DXA exams), suspicious of sexual or physical abuse, hard drug use, etc.
- There are also patients that during the follow-up come to us asking for help, usually related to social issues
