

# Chile Biliary Longitudinal Study - Chile BiLS

## Follow up

## *Follow up*

---

- Every 2 years for 6 years:
  - Hepatobiliary ultrasound
  - Blood samples
  - Anthropometry, tooth count
  - Brief Epidemiological questionnaire
  
- On non-study visit years (years 1, 3, and 5) we will contact study participants via phone, mail, or personal visit (as necessary) to update contact information and inquire about gallbladder symptoms in the past year.

### *Case ascertainment of cholecystectomy and cancer*

- Surgical schedule of four hospitals of the region.
- Emergency and hospitalization registry
- Monthly: Health service surgical registry
- Pathology registry
- Clinical record
